- Rating system based on customer preferences. We use a clear, easy-to-understand rating method which is based on hands-on figures and is calculated in real time operation mode. It allows us to gather unbiased feedback and to increase the trust of consumers. The credibility of rating results is guaranteed by a well developed protection system and monthly clearing of results.
- Organization of communication and interaction strategies between the participating companies and the target customer group e.g. voting, comments, FAQ.
- Continious search and listing of forex brokers which are newly emerging on the market for the customers to evaluate them, thus creating an objective opinion about a company.
- Storing and analysing the statistics of every company during the whole period of its development.
- Our ratings are a proof that financial market is open, informative and transparent. Their special feature is the objectivness. The initial information is not evaluated by experts and is not processed in any form except that the companies are ranked in a descending order in the rating.
